

Evidence before promotion

A software factory is only useful when its collaboration changes the result.

FactoryProof makes every handoff, veto, and human decision observable.

PLAN

BUILD

VERIFY

VETO

APPROVE

THE CHALLENGE

The hard part is money

Pocketful asks for a wallet that remains correct under retries, concurrency, and exact

A green happy path is not enough. The factory must prove the dangerous cases.

No money created

No money destroyed

A load-bearing band

Coordinator

scope, recruit, escalate

Builder

implement approved scope

Verifier

run independent checks

Critic

challenge evidence

The verifier can send work back. The critic can block promotion. The human decides.

The demo is a veto, not a victory animal

- 01 Open the case
- 02 Recruit builder + verifier
- 03 Observe the sealed failure
- 04 Revise the patch
- 05 Critic recommends
- 06 Human approves

The room recording is mandatory submission evidence.

EVIDENCE

What the judges can verify

Tests

public + sealed checks

Concurrency

atomic transfer path

Replay

idempotency returns original

Trace

audit events and gate

Scores 60% factory / 40% shipped result.

Evidence before promotion

Repository + stage folders + BAND room export + walkthrough video

Public GitHub. Clean container. No secrets. No fabricated room.

Let Bob read the code. Never obey the code.
